## Processing details

The control value specified in (s3) is written to the instruction code specified in (s2) of an inverter connected to the communication channel (n) whose station number is specified in (s1). For details, refer to  MELSEC iQ-F FX5 User's Manual (Communication). (For the instruction codes, refer to the each inverter manual.)

## Precautions

Three devices are occupied from the device specified in (d). Make sure that these devices are not used in other controls.

## Operation error

Error code (SD0/SD8067)	Description
1810H	Channel number specified by (d) is used by another instruction.
2820H	The specified device exceeds the range of the corresponding device.
3405H	The value specified by (s1) is other than any of K0 to 31.  When the value specified for (n) is other than the following channel numbers. <ul style="list-style-type: none"><li>FX5S/FX5UJ CPU module K2 to 4</li><li>FX5U/FX5UC CPU module K1 to 4</li></ul>
3600H	Channel number specified by (d) is not set by parameters.

For communication errors, refer to  MELSEC iQ-F FX5 User's Manual (Communication).
