

# Converting 32-bit signed binary data to 16-bit unsigned binary data

## DINT2UINT(P)

FX5S FX5UJ FX5U FX5UC

These instructions convert the 32-bit signed binary data in the device specified by (s) to 16-bit unsigned binary data, and store the converted data in the device specified by (d).

| Ladder diagram | Structured text <sup>*1</sup>                       |

### Setting data

#### ■ Descriptions, ranges, and data types

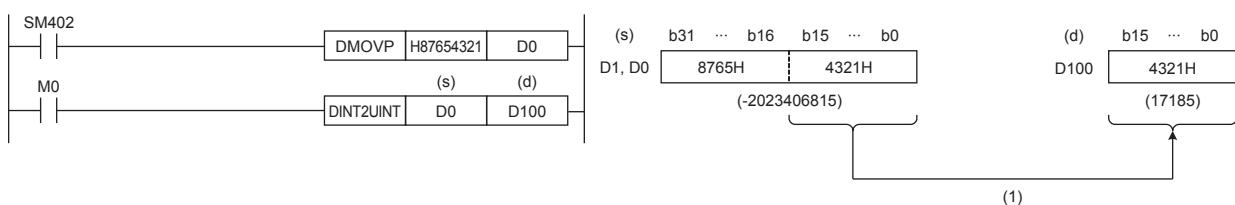

| Operand | Description            | Range                      | Data type              | Data type (label) |
|---------|------------------------|----------------------------|------------------------|-------------------|
| (s)     | Data before conversion | -2147483648 to +2147483647 | 32-bit signed binary   | ANY32_S           |
| (d)     | Data after conversion  | —                          | 16-bit unsigned binary | ANY16_U           |
| EN      | Execution condition    | —                          | Bit                    | BOOL              |
| ENO     | Execution result       | —                          | Bit                    | BOOL              |

#### ■ Applicable devices

| Operand | Bit | Word                        |                           |       | Double word |    | Indirect specification | Constant |   |    | Others |
|---------|-----|-----------------------------|---------------------------|-------|-------------|----|------------------------|----------|---|----|--------|
|         |     | X, Y, M, L, SM, F, B, SB, S | T, ST, C, D, W, SD, SW, R | UD\GD | Z           | LC |                        | K, H     | E | \$ |        |
| (s)     | ○   | ○                           | ○                         | ○     | ○           | ○  | ○                      | ○        | — | —  | —      |
| (d)     | ○   | ○                           | ○                         | ○     | —           | —  | ○                      | —        | — | —  | —      |

### Processing details

- These instructions convert the 32-bit signed binary data in the device specified by (s) to 16-bit unsigned binary data, and store the converted data in the device specified by (d).

### Operation error

There is no operation error.
